

ClaimSuite®

Global Claims Management System

An Online Solution For Claims Managers

If you handle claims for your own company or on behalf of corporate clients, the challenge is to reduce costs and time delays. The solution is to manage and access live claims data on a web-based system wherever you are in the world.

ClaimSuite® has been developed to automate your claims administration to **improve client service, increase claims capacity and reduce the claim lifecycle.**

ClaimSuite® is deployed by blue-chip companies to manage large volume and high complexity claims and risks around the world. It is secure, proven and flexible and is used by large corporations to deliver claims services to their own clients and by in-house claims departments and their suppliers to manage their own claims.

Our clients say:

“ClaimSuite provides unlimited reporting power for communicating precious and precise information to clients - **CONSISTENTLY ON A TIMELY BASIS and OFTEN BEFORE THEY ASK!**”

**Steve Gosser, Vice President
Global Risk Solutions, Inc.**

An Individualised Solution For Each Client

Off-the-shelf solutions do not provide the sophistication or flexibility required by today's claims managers, as the needs of each insured are distinct. **ClaimSuite®** is different – it can be customised for each user and to reflect client or supplier requirements. **It is designed to provide 24/7/365 access to claims data - smoothly and seamlessly – backed by a personal and responsive support service.**

ClaimSuite® is based on Microsoft® technologies and is built on internationally proven web-native architecture. Datarise people understand the needs of claims professionals and are passionate about delivering good claims technology **on budget, on time.**
